CHICAGO—World Center of Transportation and Manufacturing

Within the 8 county area comprising metropolitan Chicago live 7.5 million people with a personal income of 33 billion dollars per year. The Gross Chicago Metropolitan Product was greater than 51 billion dollars in 1970 which by way of comparison is about equal to the Gross National Product of the entire nation of Italy and greater than any of the Scandinavian countries.

Chicago leads all other metropolitan areas in the production of steel (24.5 million tons per year), radio and television sets, soap, machinery, household appliances, and food products. There are 3.5 million telephones in metropolitan Chicago, and electric power sales total 42 billion KWH per year.

Metropolitan Chicago has the world's busiest airport (O'Hare Field), the world's largest commercial building (the Merchandise Mart), the world's largest inland port, the world's busiest truck terminal, the world's busiest expressway, and under construction the world's tallest building (the Sears Tower). O'Hare Field has a total of 30 million passenger movements per year and 650,000 aircraft movements per year. This means that there is slightly more than one aircraft landing or taking off every minute of the year on the average! The John F. Kennedy expressway averages 240,000 motor vehicles per day past its busiest point. The largest truck terminal has the capacity to load or unload 285 trucks at one time or 1.5 million pounds of freight per day.

The statistics above were obtained primarily from the Chicago Association of Commerce and Industry.
